This is the general overview of the Junit test. As you can see there a few folders that where I haven't provided Junit tests, this is because most of these are either generators, or output strategies that will be modified in week 5 . The rest of the pictures will cover each of the folders for which I have provided Junit tests.

Above is the overview of week 4 but also a bit of week5 report coverage , as you can see I tested the readers just to make sure they run and don't create any issues when running with a port that doesn't exist.

Above is the overview of the decorators , where I only tested the method that will return or serve a direct purpose to the final output.

I test indirectly all the factories through testing the strategies, and as you can see below all strategies are tested.

com.design_pattern.strategy

Element	Missed Instructions	Cov.	Missed Branches	Cov.	Missed	Cxty	Missed	Lines	Missed	Methods	Missed	Classes
